

SUMA INTERNATIONAL SERVICES LTD.

Website UI/UX Design

Design Documentation & Site Flow Report

Prepared for client review and approval record

Figma Design — Approved

1. Executive Summary

This report documents the complete website design produced in Figma for Suma International Services Ltd., a Bangladesh-based travel management company established in 1997. The site was designed to serve eight distinct service verticals — Hajj & Umrah, Visa Assistance, Hotel Accommodation, Holiday Packages, Customized Tours, Medical Tourism, Corporate Travel, and Blog — under a single, consistent design system, alongside a cross-promoted sister platform, Flight24.

The site is inquiry-based rather than transactional: there is no checkout or payment flow anywhere in the design. Every page is built to guide a visitor toward one of two outcomes — submitting an inquiry form, or making direct contact by phone, email, or WhatsApp. This report walks through each of the eleven designed pages, explains its purpose, its key components, and how a visitor is expected to move through it, and closes with an overview of the site-wide navigation flow and the design system applied consistently throughout.

Design System Summary

The following visual language is applied consistently across all eleven pages:

Element	Value	Usage
Suma Teal	#007B7A	Primary buttons, links, active icons
Deep Teal	#0B3A39	Headings and dark structural text
Suma Gold	#EBB732	Ratings, accents, and small highlights only
Paper	#F6F3EC	Primary background color
Ink	#16201F	Body text
Corner Radius	16px / 8px	Cards use 16px; buttons and tags use 8px
Spacing Grid	4pt	All padding and margins in multiples of 4px

Color balance follows a 60-30-10 rule (60% background/neutral, 30% dark structural text, 10% teal and gold accents), and typography uses a single sans-serif family with weight-aware hierarchy across five weights, keeping every page visually part of the same product regardless of vertical.

2. Site Map & Navigation Structure

The eleven pages fall into four functional groups, reflecting how a visitor actually moves through the site rather than a flat list of unrelated screens.

Entry & Discovery

- Home Page
- About Us Page

Hotel Booking Track

- Hotel List Page
- Hotel Details Page

Package Booking Track

- Hajj & Umrah Package Page (selector)
- Package List Page (shared template)
- Hajj & Umrah Package Details Page
- Corporate Business Tour Package Details Page
- Medical Tourism Page

Support & Utility

- Visa Assistance Page
- Contact Page

Primary Visitor Journeys

Home → Top Packages → Hajj & Umrah selector → Package List (filtered) → Package Details → Book Now / Inquiry

Home → Best Hotels preview → Hotel List → Hotel Details → Book Now / Contact

Home or direct link → Medical Tourism → Request a Free Consultation

Any page → Contact (nav) → Form submission or direct call/email

3. Page-by-Page Documentation

01. Home Page

Purpose:

First landing point for all visitors. Acts as the central hub connecting every service vertical, giving new visitors an overview of what Suma International offers before they commit to a specific journey.

Key Components

- Hero banner promoting the flagship Hajj & Umrah service
- Exclusive Offers carousel for time-sensitive promotions
- Our Top Packages grid linking to all 8 service verticals
- Top Airlines trust strip (recognizable airline logos)
- Popular Destinations showcase
- Best Hotels for Your Next Trip preview carousel
- Flight24 cross-promotion (sister B2B platform)
- Site-wide footer with services, pages, and contact information

Visitor Flow

Visitor lands → scans top packages / offers → clicks into a service vertical (e.g. Hajj & Umrah, Hotel) or a specific hotel/package card → proceeds deeper into the relevant funnel.

02. Hotel List Page

Purpose:

Lets visitors browse the full hotel inventory and narrow results to a property that fits their budget and preferences before viewing full details.

Key Components

- Filter sidebar: star rating, price range (with slider), refundability, amenities
- Sort control (e.g. Newest)
- Hotel result cards: image, name, rating, location, key amenities, starting price, and a Details CTA

Visitor Flow

Visitor arrives from the homepage or navigation → applies filters to narrow results → selects a hotel card → proceeds to the Hotel Details page.

03. Hotel Details Page

Purpose:

Gives the visitor everything needed to decide on and book a specific hotel: full photo set, location, pricing, amenities, and nearby context.

Key Components

- Photo gallery (hero image + supporting thumbnails)

- Price box with sticky-style Book Now CTA
- Embedded map preview
- Highlighted perks list (room type, discounts, cancellation terms)
- Full property description
- Complete amenities list
- Nearby Attractions and How to Reach sections
- Similar Hotels carousel to keep the visitor browsing if this property isn't the right fit

Visitor Flow

Visitor reviews photos, price, and amenities → uses Book Now or Contact Us to submit an inquiry, or browses Similar Hotels if undecided.

04. Hajj & Umrah Package Page

Purpose:

An intermediate decision screen introducing Hajj and Umrah as two distinct pilgrimage types before the visitor commits to browsing one or the other's package list. Ensures visitors see both options clearly presented side by side, since they are commonly confused or conflated by first-time pilgrims.

Key Components

- Introductory heading framing the two journeys as related but distinct
- Two parallel, symmetrical panels: Hajj Package Summary and Umrah Package Summary
- Each panel includes a service-highlights checklist, starting price, and its own View Packages CTA
- Supporting contact cards (Support Email, Website, Contact Us) for visitors who need more information before choosing

Visitor Flow

Visitor compares the two panels at a glance → selects Hajj or Umrah based on their intent → proceeds to the filtered Package List page for that category.

05. Package List Page

Purpose:

A shared listing template used across all package-based verticals (Hajj, Umrah, Corporate, Holiday), showing every available package as a browsable, filterable grid.

Key Components

- Filter bar: Category, Price, Nights, Start Date, End Date
- Sort control and result count
- Package cards: image, package name, provider/operator name, date range, tier, duration, starting price, Book Now and Share actions
- Pagination for browsing the full catalog

Visitor Flow

Visitor arrives from the Hajj & Umrah page (or another vertical's entry point) → filters by date, price, or duration → selects a package card → proceeds to the Package Details page for that specific package.

06. Hajj & Umrah Package Details Page

Purpose:

The full, detailed view of one specific Hajj or Umrah package — the primary conversion page for the pilgrimage vertical, designed to answer every practical and spiritual-journey question before the visitor commits to an inquiry.

Key Components

- Package header: title, price, and Package Details summary (type, date range, nights)
- Full photo gallery of the destination and accommodation
- Package Overview description
- Accommodation detail card (hotel tier, distance from the Haram, stay length)
- Itinerary section with individual site/activity cards
- Services breakdown: Included vs. Available at Additional Fees
- Sightseeings section reusing the same included/add-on/not-included legend
- Cancellation Policy with disclaimer banner and detailed refund-rate table
- Support/contact cards for pre-booking questions

Visitor Flow

Visitor reviews full package details → uses the What's Included quick-jump link if price-sensitive → submits Book Now or contacts support with questions before booking.

07. Visa Assistance Page

Purpose:

A self-service information resource letting visitors check visa requirements for their destination country without needing to contact Suma directly first — reducing repetitive support inquiries.

Key Components

- Country selector dropdown (e.g. Saudi Arabia, Thailand)
- Country quick-facts panel: capital city, local time, telephone code, bank hours, exchange rate, embassy address
- Detailed Visa Requirements section broken out by applicant type (general, business, job holder, student, medical, other)
- Visa fee, processing time, and validity notes
- Prominent Contact Us Now banner for visitors who still need direct help

Visitor Flow

Visitor selects their destination country → reviews requirements relevant to their applicant type → either self-serves the checklist or converts via the Contact Us Now banner.

08. Corporate Business Tour Package Details Page

Purpose:

A package details template adapted specifically for corporate/business travel buyers, prioritizing logistical precision and structured facts over the emotional tone used on the pilgrimage pages.

Key Components

- Package header with Trip Type, Duration, and Group Size in place of fixed dates
- Overview describing end-to-end corporate travel management
- Accommodation section featuring an international business-hotel partner with executive-focused amenities
- Itinerary built around business activities (meeting facilities, networking venues, site visits) rather than sightseeing
- Services breakdown: Included, Available at Additional Fees, and Not Included
- Facility Access section (Wi-Fi, executive lounge, boardroom access)
- Cancellation Policy and dedicated Support / Account Manager contact cards

Visitor Flow

A corporate booker or HR/travel coordinator reviews logistics and inclusions → requests a quote or contacts the dedicated account manager to begin a booking on behalf of their team.

09. Medical Tourism Page

Purpose:

A dedicated landing and information page for the medical tourism vertical, designed to build clinical trust before a visitor submits a sensitive, high-stakes inquiry about treatment abroad.

Key Components

- Hero introducing consultation-based, multi-destination, 24/7-supported medical travel
- Trust statistics strip (travelers served, support availability, managed process steps, pricing transparency)
- Overview positioning Suma as a coordinated healthcare travel partner
- Treatments We Facilitate grid (treatment categories only, with a clear non-diagnostic disclaimer)
- Our Partner Hospitals section with accreditation, location, and specialty per hospital
- Accommodation options split three ways: hospital-stay patients, outpatient/day-procedure patients, and companions/family
- Your Treatment Journey — a six-step timeline from pre-arrival consultation through follow-up aftercare
- Countries Available section showing destination and treatment focus per country
- Services breakdown: Included, Available at Additional Fees, and Not Included
- Cancellation Policy and support contact cards

Visitor Flow

Visitor reviews treatment areas and partner hospitals → checks accommodation type relevant to their case → requests a free consultation, which begins Suma's coordinated intake process.

10. About Us Page

Purpose:

Builds institutional trust and legacy credibility across the whole site, independent of any single service vertical — the page most likely to be read by a first-time visitor deciding whether to trust Suma at all.

Key Components

- Hero with company photo grid and founding-year framing
- Built on Legacy company history, presented as a four-point timeline (origin, growth, current verticals, guiding approach)
- A Message from Our President — founder photo, pull-quote, and first-person letter
- Our Process — a four-step visual walkthrough of how a client's journey with Suma actually works
- Mission, Vision, and Values presented as three parallel cards
- Closing call-to-action inviting the visitor to start planning their trip

Visitor Flow

Visitor reads company history and leadership message to build trust → reviews Mission/Vision/Values → converts via the closing Send Inquiry CTA, or returns to a service page with more confidence.

11. Contact Page

Purpose:

The final, universal conversion point for any visitor who did not convert on a service-specific page, and the reference point for anyone who prefers to reach Suma directly rather than through an inquiry form.

Key Components

- Contact form: name, phone, email, tour package selection, traveler count, preferred date, and message fields
- Supporting travel photo and 24-hour response commitment
- Give a Call / Send Email quick-action cards
- Full office directory (Dhaka, Sylhet, Moulvibazar, Habiganj, Sunamganj) each with address, phone, hours, and a Get Direction map link

Visitor Flow

Visitor arrives from any page via the Contact nav item → submits the form or calls/emails directly → is contacted by a Suma representative within the stated 24-hour window.

4. Consistent Patterns Across the Site

A number of components and conventions repeat deliberately across pages, so visitors only need to learn each pattern once:

- Header and Footer — identical across all eleven pages, providing constant navigation and contact access regardless of where a visitor lands.
- Services legend (Included / Available at Additional Fees / Not Included) — used on every package details page (Hajj & Umrah, Corporate, Medical Tourism) so pricing transparency reads the same way everywhere.
- Cancellation Policy block — a consistent disclaimer-banner-plus-table format reused on every bookable package page.
- Support contact cards (Support Email / Website / Contact Us) — repeated at the base of every conversion-focused page as a low-friction fallback for visitors who are not ready to submit a full inquiry.
- Card-based listing pattern — hotels, packages, and itinerary stops all use the same visual card language (image, title, short description, action button), reducing the learning curve as a visitor moves between verticals.

5. Summary

The eleven pages documented above form a complete, self-consistent website covering discovery, service-specific detail, and conversion for every vertical Suma International Services offers. Each page has a clearly defined purpose and a specific next action for the visitor, and every page shares the same design system, so the experience feels unified even as content and tone shift between spiritual travel, corporate travel, and medical tourism. This document reflects the Figma design as approved and is intended as a reference record for development handoff and future revisions.
